NUCLEAR ENERGY IS KEY TO THE SECURE ELECTRICITY SUPPLY

30-32% of the Hungarian electricity supply is based on imported sources. In January 2017 due to the extreme cold weather this share reached 54%. The higher the share of import, the higher the danger that the quantity of imported electricity is not enough for the electricity demand, which is a problem for the population and industry as well. By constructing and operating Paks II. it can be guaranteed for 60 years that domestic, climate friendly electricity is available in large quantities.
