

## INFORMATION PROGRAMME FOR COMPANIES

**Get to know the opportunities available for suppliers to Hungary's largest project of the century!**

Nuclear energy is an especially important part of the long-term energy policy of Hungary. To facilitate this, on 30 March 2009 Parliament approved, with over 95% support, the launching of activities serving the preparation of the establishment of new nuclear power plant unit(s) at Paks. Following this, Parliament adopted the National Energy Strategy on 3 October 2011, which aims at maintaining the share of nuclear energy in the long term. The preparatory works are aimed, among other things, at clarifying the technical

parameters, obtaining the necessary licences and permits, developing social relations, assessing opportunities for domestic suppliers and devising a project scheme.

The project then operation may provide job opportunities for participating domestic companies and institutions over several decades. The scope of the proposed project is indicated by the fact that it will be necessary to deliver, manufacture and install several tens of thousands of tonnes of equipment and to use several hundreds of thousands of tonnes of building materials, and the on-site work and accommodation of several thousand persons are expected to be ensured during construction. A project of such a scale could give a huge boost to the whole economy.

Very important elements of preparation:

- Assessment of the opportunities for domestic participation; identification of domestic products and services that can be taken into account during the establishment or operation of the new nuclear power plant units; assessment of the development potential required for attaining the highest possible proportion of domestic suppliers;
- Assessment of the development potential required for attaining the highest possible proportion of domestic suppliers, up to 40%, on the basis of negotiations;
- Finding the best opportunities for domestic companies in the interest of their participation in the establishment and related support activities to the highest proportion possible;
- Making companies familiar with the requirements of the nuclear industry, establishment of quality management systems and obtaining nuclear supplier qualification.

MVM Paks II Nuclear Power Plant Development Private Limited Company (MVM Paks II Ltd.) has launched a wide supplier information programme series in order to be able to provide first-hand information to Hungarian small and medium-sized enterprises and large companies about the establishment of the new units, and to help them prepare appropriately.

We primarily expect partners that can provide high quality products/services for the establishment of the new nuclear power plant units with their own resources and perhaps by organising the cooperation of domestic small and medium-sized enterprises to come forward as potential suppliers. On the basis of preliminary information, main suppliers could come primarily from the engineering and design, mechanical, architectural, and electrical and control and instrumentation technology fields.

The purpose of the information programme series is to facilitate the possibility of assuming roles in the project with the highest proportion of domestic companies possible and to inform potential partners. At the same time, participation in the events does not automatically mean that a company may take part in the establishment of the proposed new nuclear power plant units.

Attendance at the events is free of charge, but is subject to prior registration.

To register your company (indicating the event which your representative wishes to attend), please use the following e-mail address: [titkarsag@mvmvaks2.hu](mailto:titkarsag@mvmvaks2.hu).

Join our information programme series to be able to receive first-hand information about business opportunities for your company!
